Source: News Bites

Siburan Resources Ltd announced the commencement of its maiden drilling program at its Mt Pleasant gold project near Kalgoorlie in Western Australia.

Previous explorers have outlined a number of gold prospects with intercepts including 6 m at 19.20g/t gold, 8 m at 10.5g/t gold and 6 m at 10.1g/t gold.

While the project has been subject to 45,000 m of drilling over the past 20 years, only 2% of historic drilling is below 100 m and the project has never been tested at depth.

The drill program planned by Siburan is a 1,000 m RC and diamond drilling campaign designed to confirm the grade and continuity of high-grade gold mineralisation at the Fidelitas, Anomaly 3, Anomaly 5 and Credowell prospects
